PROFESSIONAL SUMMARY

Results-driven operations and program manager with 10+ years of experience across additive manufacturing, automotive dynamometer testing, and industrial production environments. Proven track record of building programs from the ground up, leading cross-functional teams, and delivering measurable business impact — including seven figure annual cost savings through a refurbishment program developed and managed entirely from inception. Skilled in team leadership, vendor management, budget oversight, SOP development, process improvement, and software development. Brings deep technical expertise as a force multiplier in leadership: able to diagnose, direct, and drive solutions that managers without hands-on backgrounds cannot.

CORE COMPETENCIES

- **Program & Operations Management:** Department build-outs, six-figure budget management, KPI tracking, process improvement, cross-functional leadership
- **Team Leadership:** Hiring, onboarding, performance management, safety oversight, SOP and training material development
- **Vendor & Procurement Management:** Over a dozen active vendors and partners across US, China, Vietnam, Hungary, Germany, and UK; contract negotiation; local sourcing; five-figure independent purchase authority
- **Quality Assurance & Metrology:** Factory calibration, dimensional measurement, cosmetic inspection, coordinate measuring machines, trend analysis and reliability reporting. General experience with ISO 9001, IATF 16949, ISO/IEC 17025, ISO 45001, ISO 14001, APQP, PPAP, SPC, Fishbone Diagrams, and 5-Whys.
- **Additive Manufacturing:** SLS/SLA 3D printing, Formlabs PreForm, Blender, FreeCAD, SolidWorks, factory-level diagnostics and repair
- **Software & Programming:** JavaScript, React, Python, MATLAB, Java, C/C++, VB, Linux; Microsoft 365 and Google Suites; custom inventory application development; AI agent deployment (Ollama+OpenClaw)
- **Instrumentation & Dynamometer Testing:** AC/DC/chassis dynamometers, gas analyzers (Horiba, AVL), transducers, flow-meters, load cells, CMM, PUMA, INCA, ATI, CAS
- **Enterprise Software:** Jira, Salesforce, NetSuite, Propel, Magento, Grafana, MaintainX, GitHub, Google Workspace, Microsoft 365

PROFESSIONAL EXPERIENCE

FORMLABS Toledo, OH

RMA Program Manager *Aug 2022 – Present*

- Built and scaled the RMA refurbishment program from the ground up as the department's first hire — growing to a team of 3 direct reports processing approximately 300 machines per year, with an average five-figure value.
- Deliver seven-figure annual net savings by refurbishing and returning machines to customers rather than shipping replacements — sustaining a 99%+ repair rate on all units.
- Manage a six-figure annual operations budget, across over a dozen active domestic and international vendors.
- Lead all team management functions: hiring, onboarding, performance reviews, safety training, and operational training.
- Drive continuous process improvement: reduced Mean Time to Repair by 10% in Year 1, 7% in Year 2, and 3.6% in Year 3; lowered operational costs 2–5% annually; reduced company-wide RMA rates by 9% over three years through proactive service support.
- Maintain 99%+ quarterly customer satisfaction scores and 100% inventory accuracy across all tracked parts and stock.
- Enforce a rigorous quality standard: every refurbished machine is fully calibrated with factory equipment, scored on 36 dimensional measurements to ± 300 microns, and cleared through a 50-point cosmetic inspection before shipment.

- Developed and deployed Refurb Inventory Manager — a custom JavaScript/React inventory management application used daily by the team, supporting barcode/camera scanning, filtering, search, and bulk CSV import/export. Maintained 100% inventory accuracy since launch.
- Designed and implemented an in-house AI agent (local Ollama instance integrated with OpenClaw) connecting all SOPs, technical documentation, and inventory data — enabling technicians to query procedures, locate parts, and assist in troubleshooting in real time. Initiative originated from personal experimentation and was adopted across the full team.
- Authored the majority of departmental SOPs, troubleshooting flowcharts, onboarding materials, and training documentation.
- Manage sourcing, negotiation, and ongoing vendor relationships with over a dozen vendors and partners across the US, China, Vietnam, Hungary, Germany, and the UK — including identifying and securing cost-effective local alternatives to overseas packaging sources.
- Serve as a cross-functional technical resource for Engineering, R&D, Hardware Reliability, and Customer Support — identifying product failure trends, contributing to future product design reviews, and resolving escalated Jira tickets before they result in additional RMAs.
- Maintain Formlabs in-house print farm of over 200 machines producing sample parts as well as customer orders.
- Deployed directly to Tier 1 customer sites when field issues require the highest-level technical intervention, bringing a full suite of calibration jigs and fixtures to ensure rapid and complete resolution.

Engineering and Maintenance Technician *Jun 2025 – Dec 2025*

Temporarily embedded with the Engineering and Maintenance Team at Formlabs Resin Production Facility to spearhead the move and buildout of both the Refurbishment Center and our in-house Print Farm of over 200 machines, as well as support plant engineering and maintenance activities during project downtime.

- Project Management: Planned and managed the facility move and build-out logistics for the refurbishment center and print farm.
- Contractor Coordination: Coordinated on-site tasks and schedules with outside contractors.
- Bulk Systems & Fluid Handling: Handled the build-out, installation, repair, and maintenance of bulk resin storage systems, pumping systems, and resin pumps.
- Automation & Packaging Equipment: Installed, repaired, and maintained automated capping machines, conveyor systems, computer-vision systems, flow-pack/heat sealers, and automatic box assembly machinery.
- Infrastructure & Utilities: Installed networking infrastructure, pneumatic systems, and nitrogen systems.
- Plant Maintenance: Participated in daily plant engineering tasks and preventative maintenance routines.

JACOBS TECHNOLOGY (Ford Dynamometer Laboratory) Dearborn, MI

Wing Lead / Dynamometer Laboratory Technician *Apr 2014 – Aug 2022*

- Served as Wing Lead for 5 years, directing 5–14 technicians across a dedicated wing of Ford’s dynamometer laboratory
- Functioned as a liaison between engineers and technicians, translating complex test requirements into executable tasks and performing preliminary QC review of first-pass results before data submission.
- Responsible for wing safety: ensured all technicians maintained current safety certifications and proper PPE compliance.
- Prepared, instrumented, installed, and tested engines and powertrains using AC, DC, inductive, and chassis dynamometers.
- Executed emissions, catalyst development, air/fuel mapping, durability, and extreme environment simulation programs using PUMA, INCA, ATI, ADACS, CAS, MATLAB, LabView, and a number of proprietary software tools.
- Installed and calibrated optical sensors, hall effect sensors, pressure transducers, flow-meters, load cells, smoke meters, soot meters, thermocouples, and real-time X-ray fluid density analyzers ; built and modified engine wiring harnesses.
- Operated and maintained Horiba and AVL gas analyzer systems; performed light PLC/controls tuning.
- Recognized for improving testing methods and overall lab productivity.

FOOD SERVICE LEADERSHIP Monroe, MI

Kitchen Lead / Crew Lead — Buffalo Wild Wings & Taco Bell (Yum! Brands) *Aug 2009 – Apr 2014*

- Led kitchen operations as Kitchen Lead during shifts, directing teams of 4–8 cooks and managing food prep, quality, and throughput.
- Responsible for crew training, shift scheduling, and cash management.

EDUCATION

MONROE COUNTY COMMUNITY COLLEGE Monroe, MI

Associates of Applied Science: Computer Science – Programming *Graduated: April 2011*
